ASTRA® Automation API
Version 8.2

This is the ASTRA Automation API software for use when creating software that uses the ASTRA automation interface.

To use the ASTRA Automation API, it is necessary to have some basic programming knowledge using Microsoft .NET technology or python. The automation also supports other programming languages that more advanced users may prefer to the .NET technology.

In the "Docs" directory, you will find the documentation for the automation. The "Src" directory contains the Visual Studio solution for the sample C# programs using the automation interface. A .NET/COM interop DLL is in the "Src/SDK/SDKCommon" directory. The python library and the sample program are in the "Src/SDK/SDKPython" directory.

The ASTRA Automation API supports ASTRA version 8.1.2.1 or higher (without Security Pack) and ASTRA version 8.2 or higher (with Security Pack). The python library will only work with ASTRA version 8.2 or higher.

CONTACTING CUSTOMER SUPPORT

If you encounter installation, configuration, or operation issues, which you cannot resolve, report them with as much details as possible (e.g., ASTRA software version, Windows version, error messages, files that exhibit the issue) to Wyatt Technology®.
